

Project Scope

Network Quality Assurance for a huge financial institution to assure compliance with design and the implementation of best practices.

Customer Setup Overview

Our customer is one of the key players in the finance market with a huge financial statement. Its network setup consists of big Headquarters containing the mission critical services connected to many remote offices via a global service provider. The network infrastructure is built mainly using Cisco Data Center, Routing & Switching and Security products and technologies.

Business Challenge

- Ensure high-level performance and improve the responsiveness of the voice and video applications running on the network's infrastructure.
- Ensure that the configurations of the network devices are compliant with the vendor's best practices.
- Develop and deploy a standard for the design and configuration of the different network segments.

How We Helped

During the Quality Assurance project, our team utilized their deep technical and business expertise to:

- Review the implemented network design against best practices and the vendor's recommendations.
- Review the configuration of the network devices.
- Identify issues and propose relevant recommendations.
- Perform a review of existing network documentation and highlight areas for improvement.
- Develop a design and implementation standard to be followed.
- Deploy the agreed on recommendations and configure the network devices to achieve configuration standards and consistency.

Benefits for Business

We assisted the customer to gain the following benefits:

- Decrease the TCO by getting the most of the network infrastructure.
- Develop justifiable financial plans.
- Increase the network availability, reliability, scalability and security.
- Minimize network outages by complying with the design and the implementation of best practices.
