

Project Scope

Network Quality Assurance for a huge financial institution to assure compliance with design and the implementation of best practices.

Customer Setup Overview

Our customer is a major financial corporate with a huge financial statement. Its network setup consists of huge Headquarters containing the mission critical services connected to many remote offices via a global service provider. The network infrastructure is built mainly by using Cisco Data Center, Routing & Switching and Security products and technologies.

Business Challenge

- Ensuring high level performance and improving the responsiveness of the voice and the video applications running on the network Infrastructure.
- Guaranteeing that the network devices configurations are compliant with the vendor's best practices.
- Developing and deploying a standard for the design and the configuration of different network segments.

How We Helped

During the Quality Assurance project, our consultants have utilized their extensive technical knowledge and business experience to:

- Review the implemented network design against best practices and the vendor's recommendations.
- Review the configuration of the network devices.
- Identify issues and propose the relevant recommendations.
- Perform a review of existing network documentation and highlight areas for improvement.
- Develop a design and implement standard to be followed.
- Deploy the agreed on recommendations and configure the network devices to achieve configuration standards and consistency.

Benefits for Business

We have assisted our customer to gain the following benefits:

- Decrease the TCO by getting the most of the network infrastructure.
- Develop justifiable financial plans.
- Increase the network availability, reliability, scalability and security.
- Minimize network outages by complying with the design and implementation best practices.
