

Cisco New DC Implementation

Customer Overview

Our customer is a world-leading planning, design, management and supervision consultancy trusted by more than 850 clients. For over 50 years, our Customer has served the public and private sectors, working on projects with a total investment of \$270 billion. Today, the organization has 6,900 staff members operating across 45 offices in the Middle East, Africa, Asia, and Europe, of which are five principal design centers in Beirut, Cairo, London, Pune, and Amman

Business Challenges

The organization is opening new HQ in Smart Village and it is required to build a state-of-the-art network infrastructure for the new HQ while maintaining connectivity with the existing HQ building to provide seamless migration for services and resources.

Solution & How We Helped

We worked closely with the customer during the planning phase to identify the networking solution components that can support the current and anticipated business needs. Afterwards, we conducted successive technical sessions with the customer to formulate the low level design and implementation aspects. Some of the data center advanced technologies such as Overlay Transport Virtualization (OTV) is being implemented as part of the project. Staging phase is currently in progress in which we develop the offline configuration.
